MARLON DO COUTO

Tel Aviv, Israel | LinkedIn | marlondocouto.com | GitHub

PROFESSIONAL SUMMARY

Data scientist with ~6 years of experience in time series forecasting and data analytics, from graduate work at Duke to production models in fintech. Owns models end to end, from problem framing to deployment, and turns results into clear decisions for non-technical stakeholders. Has worked in the U.S., Brazil and the U.K.; now based in Tel Aviv and open to roles across industries.

WORK EXPERIENCE

Remitly *(fintech, international payments)*

Senior Data Scientist | *Jan 2026 – Present*

- Built a seasonal, weekday-level forecasting model that improved accuracy by 30% over the legacy model, freeing ~$30M in capital daily and saving ~$3M a year
- Designed a two-stage forecasting pipeline, using moving-average decomposition to isolate the trend and XGBoost to predict the remaining error, reducing financial risk by 15%
- Improved spike and anomaly detection with a Gaussian mixture layer and a holiday-effects module, reducing forecast error by 12%
- Built and optimized ETL pipelines that automate the analysis behind daily funding and hedging decisions
- Automated leadership reporting by integrating internal data tools, Google Workspace and Git, using Claude to draft commentary on what drives key metrics

Senior Treasury Data Analyst | *Apr 2023 – Jan 2026*

- Deployed a machine learning model that improved liquidity management by ~$500K
- Built ETL pipelines for risk metrics, reducing daily exposure by up to $2M
- Streamlined eight team processes, cutting operational friction by 20%
- Defined data-quality and dataset-health metrics for treasury operations

Treasury Data Analyst | *Jun 2021 – Apr 2023*

- Migrated VBA tools to Python, improving efficiency by 30%
- Automated 10+ ETL pipelines, reducing data loss
- Built dashboards and reports to monitor risk metrics and support decision-making

Parametric Portfolio Associates

Portfolio Administrator | *2018 – 2019*

- Reconciled 4,000+ accounts daily and resolved discrepancies across 8,000–10,000 transactions
- Built VBA reconciliation tools that streamlined the team's workflow

PROJECTS

Weekday-seasonal forecaster | *Python, pandas* | Explainable daily-flow forecasting model with walk-forward backtesting; 35–58% lower error than naive baselines

Cash-flow forecaster | *Python, scikit-learn, Prophet* | Five-step model comparison adding Gaussian mixture spike detection, holiday effects and Fourier seasonality; 38% lower error than the seasonal baseline

EDUCATION

Duke University – M.S. in Quantitative Management / *2020 – 2021*

Seattle University – B.A. in Business Administration, Finance / *2016 – 2018*

University of Washington – Certificate in Python Programming / *2023 – 2024*

TECHNICAL SKILLS

Programming & data: Python (pandas, NumPy, scikit-learn, statsmodels), SQL, R, Scala, Git, Apps Script

Machine learning & statistics: Time series forecasting, predictive modeling, XGBoost, Prophet, Gaussian mixture models, anomaly detection, generative AI (Claude)

Visualization & BI: Tableau, Mode Analytics, Periscope, Plotly, advanced Excel

Communication: Stakeholder management, presenting complex topics to non-technical audiences

Finance: Financial risk management, Bloomberg, Reuters Eikon

LANGUAGES

Portuguese: Native **English:** Fluent **Hebrew:** Beginner (learning)
